

## MATTHEWS INTERCEPTOR DRAINAGE PROJECT

Construction will begin in October for a drainage project that consists of 1,190 feet of 6'x6' concrete box culverts and 822 feet of 6'x8' concrete box culverts which will be installed in the middle of Matthews Drive. The project will begin at the south end of Matthews Drive at the sump area and proceed north to Park Place. It will then turn east for 200 feet and finally turn north to Kings Court. ***The purpose of this project is to reduce flooding in the area.***

The project will take approximately 200 calendar days to complete. During construction, sections of Matthews Drive will be closed to traffic. Residents will be allowed access to their driveways except when construction prohibits access. Advanced notice will be given to residents of the specific dates when construction will prohibit access. When access is prohibited residents are encouraged to park on side street locations. Please do not park on Matthews Drive.

PLEASE OBSERVE ALL TRAFFIC SIGNS  
PROJECT MANAGER: MICHAEL BARNES, P.E., CITY ENGINEER
